**Hello my name is all: Alienyor and solo I am a designer of tools, that is to say a drawer.**

This is a design of a new tool for github I hope that some good programmer may program this tool. I only contribute the designs and you or another programmer reality will do her. You can be present at my designs because are free. That everything be for the sake of the community worldwide hacker. Greetings and luck to wholes that he program the best.

You, discharge this PDF and observe the design, and if he might program the tool. Remember than everything pannier stop, the community of programmers and of hackers of whole the world the tool is supposed to be written in python. A IP, for some open port and service, is supposed to inject the little given program and is supposed to be able to execute it if the user thus desires it. They have the design and the legend here.

I lay plans and drawing

```
                        Banner
                  ¨Inyect and clean=money¨

                  [ Malwere Inyector ]

                  created by: Name
              Site: https://github.com/...
              Ejemp: maiy.py  -h or help

     -h  or --help    ---- help or information
     -u               ---- Upload malwere .exe .bat .apk .vbs .etc
     -r               ---- IP victim
     -p               ---- Port victim
     -e               ---- Run malwere uploaded

     Ejemp: python3 may.py -u trojanC.exe -r 190.0.0.1 -p 80 -e trojanC.exe

         Note: The uploaded is in C: Download or SDCARD Download
```

The executable pannier: **may.py**

It will be executed in python2 or python3

You, add the necessary **requests** for his total functi]oning.

lease try the correct functioning of the tool.

This is supposed to be the way out of the console:

[ok] ...Uploaded date

[ok] ...Run date
